

The Moore Collaborative, Architects

The Moore Collaborative (TMC) was one of the premiere firms in Northern Nevada from 1991-2001. With concentrated experience in all aspects of architectural design, TMC has worked on over \$500 million in facilities in Northern Nevada & California over its tenure. TMC was located in the beautiful Southwest Reno area. Some of the high profile projects they designed include the Washoe County High School prototype design. Three high schools were constructed from the prototype in outlying areas surrounding Reno / Sparks. Bishop Manogue High School is another high profile project designed by the firm.

TMC completed the University of Nevada, Reno Fire Sciences Academy located in Carlin, Nevada. A terrific example of the Design / Build partnership process, the \$31 million facility was completed in 16 months from the beginning of design.

TMC has worked in “collaboration” with a number of regional architectural firms in the effort to satisfy specific client needs with specialized expertise. We have also worked closely with some of the largest contracting firms in a Design / Build relationship. Our philosophy of team value and collaboration was a definite asset in the project delivery process.

Value Architecture

△ This term expresses our commitment to a balance between architectural design, the owner’s goals and value engineering compliances.

Design Creativity

△ Design Creativity is a trademark of the projects headed by The Moore Collaborative. They have received numerous design awards for their projects nationally.

Local Area Familiarity

△ The Moore Collaborative has been working in the Northern Nevada area extensively for almost 30 years. They have experience with local codes, officials, climate conditions, permit processes and project facilitation.

Client contacts with decision makers is an important element in making visions of projects realities.

Value / Cost Analyses

△ We examine the initial and life cycle cost of our designs throughout project development - our goal is a cost effective project.

TMC / BSS
BISHOP MANOGUE HIGH SCHOOL

Computer-Aided Design and Drafting

△ An invaluable tool in the resolution of complex spaces, prototypical design and design simulations, CAD provides quality control and increased clarity of documents.

Attention to Detail

△ TMC prioritized “Attention to Detail” throughout the design process. This was especially evident in the Project Manual and Specifications.

Writing specifications was not a two-day task to be rushed through during the final stages of Construction Documents. Selection of Products were reviewed during the Design Development Phase and copies were sent to each applicable design engineer for coordination and inclusion in the Construction Documents

State-of-the-Art Technology

△ Through the BJSS Technology Division, we were experienced in providing designs for fiber optics, computer integration and technology delivery systems.

Management Techniques

- △ Principal Involvement
- △ Communication through single Project Manager
- △ Strict Adherence to Design and Construction Schedule
- △ Program Quality Control and Compliance
- △ Cost Control
- △ Coordination of Consultants

△ Through the "Organizational Framework", potential problems were ferreted out during the process utilizing the Collaborative Concept of design. An important "piece of the Puzzle" was the Owner. Because **The Moore Collaborative** recognized that was THEIR project! Projects are a realization of your (the client's) vision and needs.

Construction Administration

△ An often overlooked but exceedingly important area of the Collaboration's responsibilities was in Construction Administration. The Moore Collaborative had an extensive background in construction related experiences. TMC's approach to Construction Administration was intended to insure the construction is accurate, high quality and in conformance with the Construction Documents.

“The Moore Collaborative was founded on the philosophy of improving serviceability to clients beyond those services typically offered by traditional firms. This meant adopting an attitude conducive to the mutual exchange of ideas and forsaking the autocratic mentality!”
